

Experienced UI/UX Designer for Figma Prototype of Healthcare Software Solution

Description:

We are seeking an experienced and talented UI/UX designer or product designer to join our team in creating a product prototype for a healthcare software solution designed for a large health system. The designer will be responsible for developing a high-quality, click-through interface in Figma that we can showcase to potential customers. We will provide templates and PowerPoint mock-ups to guide the design process.

We expect the first phase of this project to take approximately 1 week

We would expect you to present examples of previous Figma work and walk us through your design process and experience.

Responsibilities:

- Collaborate with our team to understand project requirements and goals
- Transform PowerPoint mock-ups and templates into a functional, click-through prototype on Figma
- Create visually appealing and user-friendly interface designs that adhere to industry best practices
- Iterate on designs based on feedback from team members and stakeholders
- Deliver a polished prototype ready for presentation to potential customers

Preferred Requirements:

- 5+ years of experience as a UI/UX designer or product designer, with expertise using Figma for creating software product prototypes
- Experience designing for healthcare software solutions or related fields
- Excellent communication and presentation skills
- Experience working with Fortune 500 companies is a plus
- Ability to work collaboratively and independently to meet deadlines
- Passionate about creating user-centered designs that make a positive impact on users' lives
