Security / login

- Request user to login.

- Let us know how it will be implemented.

- User should be able to login via Google or create a new account (AWS Cognito or similar).

- How much does it cost?

- How much time required to implement?

- How to prevent DDoS attack?

Analytics

- Track user's questions and responses from ChatGPT
  - Database implemented should allow ease for analysis:
    - We might want to see the conversation of a specific user,
    - We might want to find out how many users ask regarding a specific topic
- When user login again, do not load chat history from the previous conversation
- Let us know how it will be implemented.
- How much does it cost?
- How much time required to implement?

API / Example Code
